

Minutes of The First and Second Meeting

OS1 group B

6th & 13th Mar 2025

Chair Orvila Sarker

Secretary Cong Deng

Members Sheng Wang
Tianhua Zhang
Xin Wei
Yifan Gu

Apologies None.

1. Time and Place

The first and second team meeting for the MCI OS1 project was held at **Inggarni Wardli 5.57** on **6th & 13th Mar** at **3:30 PM**.

2. Quorum Announcement

The Chairman announced that a quorum of the group was present, and that the meeting, having been duly convened, was ready to proceed with its business.

3. Summary of Previous Meeting

The team briefly recapped the first meeting, where the supervisor introduced the project and guided the group on how to complete **Task 1**. The main focus was on collecting challenges and skills from ChatGPT for the provided dataset.

4. Group Milestone

4.1. Overview

The team successfully completed **Task 1**, which involved collecting challenges and skills from ChatGPT and retrieving accepted answers from GitHub for the dataset of **386 security-related questions from Stack Overflow and GitHub**.

4.2. Task Division and Completion

Each team member was assigned 77 questions, ensuring an equal distribution of workload. All responses were gathered and documented in the shared repository on GitHub.

4.3. Challenges Faced

The team discussed some challenges encountered while completing Task 1:

- Some Stack Overflow/GitHub questions lacked clear security-related issues, making it difficult to extract relevant challenges and skills.
- Inconsistent formatting in ChatGPT responses required additional manual editing for uniformity.
- Retrieving accepted answers from GitHub required additional effort as some posts lacked direct solutions.

5. Submission and Next Steps

The completed **Task 1** has been successfully submitted to the **GitHub repository**. The team is now preparing to start **Task 2**, which involves categorizing the dataset using an **SVM classifier** and manually validating the results.

6. Task 2 Planning

6.1. Initial Discussion

The team reviewed the requirements for **Task 2**, which involves classifying questions into categories such as **Conceptual**, **How-to**, and **Debugging** using a **Support Vector Machine(SVM) classifier**.

6.2. Next Steps

Dataset Preparation: Team members will manually label a subset of the questions to serve as training data for the classifier.

Model Implementation: One or more team members with experience in machine learning will lead the implementation of an **SVM-based classifier**.

Validation: After classification, team members will manually check a sample of categorized questions to refine accuracy.

7. Task 2: Work Distribution and Timeline

Tasks:

- Manually label 50-100 questions to create a training dataset.
- Preprocess text data (tokenization, stopword removal, standardization).
- Convert text into TF-IDF vectors for feature extraction.
- Train an SVM classifier and apply it to the full dataset.
- Manually validate a sample of classified questions (50-100 entries).
- Assess classification accuracy and refine the SVM model if necessary.
- Summarize and document findings in a report.

Work Distribution and Timeline

Task	Assigned Member(s)	Deadline
Manually label 50-100 Stack Overflow/GitHub questions	TBD	TBD
Preprocess text data (tokenization, stopword removal)	TBD	TBD
Convert text into TF-IDF vectors	TBD	TBD
Train the SVM classifier	TBD	TBD
Run classifier on the entire dataset	TBD	TBD
Manually validate 50-100 classified entries	TBD	TBD
Evaluate classification results and fine-tune SVM	TBD	TBD
Compile and document classification findings	TBD	TBD

8. Pitch Presentation Planning

The team has a **Pitch Presentation** scheduled in the fourth week on **27th Mar**. The presentation will focus on the progress of **Task 1 and Task 2**, and the next steps for the project.

9. Adjournment

The next team meeting will be held on **20th Mar** at **3:30 PM** to review progress on **Task 2 and Pitch Presentation preparation**.
